

INDEX to VOL. XX.

- A**BSORPTION band spectrum of selenium, 347.
- Acetone, constitution of water in solutions of non-electrolytes, 587.
- Actinium family of radioactive elements, the branching ratio of, 623.
- Air afterglow, 777.
- Airey (Dr. John R.), the circular and hyperbolic functions, argument $x/\sqrt{2}$, tables of, 721; the circular sine and cosine functions, argument $\log_e x$, tables of, 731.
- Alkaline chlorides at low concentrations, the refractive index of, 32.
- Alty (Prof. J.) and Johnson (O.), the cataphoresis of particles of the fatty acids and related compounds, 129.
- Aluminium-zinc alloys at elevated temperatures, X-ray study of, 761.
- Atomic scattering factors of nickel, copper, and zinc, 866.
- Babbitt (J. D.) and Mendelssohn (K.), resistance thermometry below 10°K. , 1025.
- Balancing of valve circuits, 532.
- Bareford (Dr. C. F.) on the nature of luminous streamers from the condensed spark in vacuo, 825.
- Barker (H.) and Wheatcroft (Prof. E. L. E.), the development of a spark from a glow, 562.
- Bateman (E. H.), rectangular plates supported on flexible beams, 607.
- Beeching (R.), some quantitative and qualitative observations on the electron diffraction pattern from the natural (111) face of diamond, 841.
- Bending of thin circular disks under certain non-uniform distribution of normal thrust, 1158.
- Benjamin (Dr. M.), the influence of impurities in the core-metal on the thermionic emission from oxide-coated nickel, 1.
- Berkeley, The Earl of: the osmotic pressures of a mixed vapour, 481.
- Beryllium, the lattice constants of, 1155.
- Bickley (Dr. W. G.), some solutions of the problem of forced convection, 322.
- and Naylor (John), a short table of the functions $K_n(x)$, from $n=1$ to $n=16$, 343.
- Bircumshaw (Dr. L. L.) and Preston (G. D.), studies in the oxidation of metals.—Part II. Copper, brass, aluminium-brass, aluminium-bronze, magnesium, and some magnesium alloys, 706.
- Books, new:—G. H. Hardy, J. E. Littlewood, and G. Polya's *Inequalities*, 203; E. F. Armstrong and K. F. Armstrong's *Monographs on Biochemistry: The Carbohydrates*, 204; Leonard B. Loeb's *The Kinetic Theory of Gases*, 206; Alice D. Snyder's S. T. Coleridge's 'Treatise on Method' as published in the 'Encyclopædia Metropolitana,' 207; Marston Morse's *The Calculus of Variations in the Large* (American Mathematical Society. Colloquium Publications, vol. xviii.), 410; R. E. A. C. Paley and Norbert Wiener's *Fourier Transforms in the Complex Domain* (American Mathematical Society. Colloquium Publications, vol. xix.), 411; Bulletin of the National Research Council, No 90. *Physics of the Earth*.—VI. *Seismology* (Published by the Research Council of the National Academy of Sciences, Washington, D.C.), 412;
- Phil. Mag.* S. 7. Vol. 20. No. 137. Dec. 1935.

- Formic and acetic acids; constitution of water in solutions of weak electrolytes, 310.
- Fractional calculus, 781.
- Francis (Marcus) and Da-Tchang (Tcheng), the branching ratio of the actinium family of radioactive elements, 623.
- Fuming sulphuric acid, the Raman spectrum and constitution of, 616.
- Gamma-radiation excited by the impact of α -particles on heavy elements, attempts to detect, 294.
- Gauss's theorem in general relativity, some applications of Whitaker's extension of, 971.
- Gemant (A.), recent investigations on electrets, 929.
- Geometrical weight method compared with other treatments in viscosity and heat conduction, 355.
- Ghosh (M.) on the theory of electron scattering by atoms, 234.
- Glow, the development of a spark from a, 562.
- discharge, the theory of the, 578.
- Gogate (D. V.) and Kothari (Duleh Sinha) on the theory of surface tension of liquid metals, 1136.
- Grime (G.), the determination of Young's modulus for building materials by a vibration method, 304.
- Hägg (G.) and Hybinette (A. G.), X-ray studies on the systems tin-antimony and tin-arsenic, 913.
- Harper (Dr. W. D.) on the theory of the combination coefficients for large ions: a correction, 740.
- Harley (Sir Harold) and Macfarlane (Angus), the standard electrode potential of lithium in methyl alcohol, 611.
- Heat conduction and viscosity according to the geometrical weight method compared with other treatments, 355.
- conductivity, the limaçon distribution function, 97.
- Helium, neon, and argon, energy losses of electrons in, 1109.
- Hoare (Dr. F. E.), Brindley (Dr. G. W.), and Spiers (Dr. F. W.), X-ray and magnetic measurements of KCl powders in relation to lattice distortion and photochemical coloration, 1041.
- Hybinette (A. G.) and Hägg (G.), X-ray studies on the systems tin-antimony and tin-arsenic, 913.
- Hygroscopic droplets, the nature of the nucleus in, 209.
- Hyperbolic and circular functions, argument $\alpha/\sqrt{2}$, tables of, 721.
- Induced β -radioactivity with the light elements, the non-observance of, 266.
- Intermittent lightning discharges: a re-discussion of Dr. H. H. Hoffert's lightning photograph, 1144.
- Ionization, theories of, 242.
- Isotopes of arsenic, selenium, mercury, and lead, 479.
- of the radioactive elements and their disintegration, 25.
- Isotropy, some new solutions of the differential equation for, 1104.
- Jagger (J. G.), vibration of an elastic column, 997.
- Japolsky (Dr. N. S.), a theory of elementary particles.—Part I. Electromagnetic whirl, 417; Part II. Electromagnetic whirls and elementary particles, 641.
- Johnson (O.) and Alty (Prof. T.), the cataphoresis of particles of the fatty acids and related compounds, 129.
- k -function, on some properties of the, 468.
- Keyston (Dr. J. E.) and Brose (Prof. H. L.), collisions of slow electrons with methane molecules, 902.
- $K_n(x)$, table of the functions from $n=1$ to $n=16$, 343.
- Kimball (Dr. W. S.), the Limaçon heat conductivity distribution function, 97; viscosity and heat conduction according to the geometrical weight method compared with other treatments, 355.
- King (Dr. Ronold), a loop-transmitter, 514.
- Klemperer (Otto), the use of electron lenses for β -rays, 545.
- Kothari (Duleh Sinha) and Gogate (D. V.) on the theory of surface tension of liquid metals, 1136.
- Lattice constants of beryllium, 1155.

- Lattice distortion and photochemical coloration, X-ray and magnetic measurements of KCl powders in relation to, 1041.
- in a copper-beryllium alloy, an X-ray investigation of, 893.
- in copper and nickel powders, an X-ray examination of, 882.
- Lewis (Dr. Bernard) and von Elbe (Dr. Guenther), remarks on the experimental determination and theoretical calculation of flame temperatures and explosion pressures, 44.
- Lewis (Dr. W. B.) and Bowden (Dr. B. V.), attempts to detect γ -radiation excited by the impact of α -particles on heavy elements, 294.
- Lewis (T.), electromagnetic field theory, 1001; the motion of free particles in Milne's model of the universe, 1092.
- Light absorption in paramagnetic crystals and solutions, 1121.
- Lightning discharges, intermittent: a re-discussion of Dr. H. H. Hoffert's lightning photograph, 1144.
- Limaçoidal heat conductivity distribution function, 97.
- Liquid metals, on the theory of surface tension of, 1136.
- Lithium in methyl alcohol, standard electrode potential of, 611.
- Loop transmitter, a, 514.
- Lorentz transformations, generalized, and the velocity of light, 835.
- Lowery (Dr. H.), Bor (J.), and Wilkinson (H.), the optical constants of the copper-nickel alloys, 390.
- Luminous streamers from the condensed spark in vacuo, on the nature of, 825.
- Macfarlane (Angus) and Hartley (Sir Harold), the standard electrode potential of lithium in methyl alcohol, 611.
- Magnetic birefringence in solutions of paramagnetic salts of rare earths, 856.
- Mahanti (P. C.), the electric moments of the alkyl monohalides, 274.
- Mathieu equation, characteristic values of, 288.
- Measurement of small amplitudes of vibration, 953.
- Mendelsohn (K.) and Babbitt (J. D.), resistance thermometry below 10° K., 1025.
- Mercury arcs, the oscillations of atmospheric, 166.
- Metals, studies in the oxidation of.—Part II. Copper, brass, aluminium-brass, aluminium-bronze, magnesium, and some magnesium alloys, 706.
- Milne's model of the universe, the motion of free particles in, 1092.
- theory, on the world-trajectories in, 1062.
- Moghe (D. N.) and Narlikar (Prof. V. V.), some new solutions of the differential equation for isotropy, 1104.
- Narlikar (Prof. V. V.), on the world-trajectories in Milne's theory, 1062.
- and Moghe (D. N.), some new solutions of the differential equation for isotropy, 1104.
- Nayler (John) and Bickley (Dr. W. G.), a short table of the functions $K_n(x)$ from $n=1$ to $n=16$, 343.
- Nevin (Thomas E.), the absorption band spectrum of selenium, 347.
- Newman (Prof. F. H.), Air after-glow, 777.
- and Walke (H. J.), note on cosmic ray ions and the shower producing radiation, 263.
- Nickel, copper, and zinc, atomic scattering factors of, 865.
- and nickel salts, wave-length measurements of the $L\alpha_{1,2}$ and $L\beta_1$ lines, 504.
- coatings, electro-deposited, examination of, by X-ray diffraction, 964.
- Niessen (Dr. K. F.), a contribution to the symbolic calculus, 977.
- Non-electrolytes, constitution of water in solutions of.—I. Acetone, 587.
- Nuclear evolution of iron, cobalt, and nickel, note on the, 738.
- Nucleus in hygroscopic droplets, the nature of, 209.
- O'Ceallaigh (Cormac), and Dowling (John J.), the balancing of valve circuits, 532.

- Optical constants of the copper-nickel alloys, 390.
- Oscillations of atmospheric mercury arcs, 166.
- Osmotic pressures of a mixed vapour, 481.
- Owen (Prof. E. A.) and Pickup (Dr. Llewelyn), X-ray study of aluminium-zinc alloys at elevated temperatures, 761; the lattice constants of beryllium, 1155.
- Owen (J. B. B.), and Southwell (Prof. R. V.), stress calculation for a radially braced polygonal ring, 1073.
- Oxidation of metals, studies on the.—Part II. Copper, brass, aluminium-brass, aluminium-bronze, magnesium, and some magnesium alloys, 706.
- Oxide-coated nickel, the influence on thermionic emission of impurities in the core-metal, 1.
- Pai (N. Gopala), the Raman spectrum and constitution of fuming sulphuric acid, 616.
- Paramagnetic salts of rare earths, magnetic birefringence in solutions of, 856.
- Paramagnetism, studies in.—III. Light absorption in paramagnetic crystals and solutions, 1121.
- Particles, theory of elementary, —Part I. Electromagnetic whirl, 417; Part II. Electromagnetic whirls and elementary particles, 641.
- Partridge (G. F.), the measurement of small amplitudes of vibration, 953.
- Paschen's law at low striking potentials, 571.
- Photomagnetism, studies in, 145.
- Photometry of gaseous discharge-tubes, the selectivity of photometric integrators, 745.
- Physical problems, on the general solution of a class of, 632.
- Pickup (Dr. Llewelyn) and Owen (Prof. E. A.), X-ray study of aluminium-zinc alloys at elevated temperatures, 761; the lattice constants of beryllium, 1155.
- Porter (Prof. A. W.) on surface tension near the critical point, 1163.
- Positive ions in the corona discharge, velocities of, 68.
- Preston (G. D.) and Bircumshaw (Dr. L. L.), studies on the oxidation of metals.—Part II. Copper, brass, aluminium-brass, aluminium-bronze, magnesium, and some magnesium alloys, 706.
- Radioactive elements, the isotopes of, and their disintegration, 25.
- Raha (P. K.) and Bose (Prof. D. M.), studies in photomagnetism, 145.
- Raman spectrum and constitution of fuming sulphuric acid, 616.
- Rao (C. S. Siva), constitution of water in solutions of weak electrolytes.—I. Formic and acetic acids, 310; constitution of water in solutions of non-electrolytes.—I. Acetone, 587.
- Radio-frequency measurements, on the avoidance of errors due to the "leads" in, 75.
- Rectangular plates supported on flexible beams, 607.
- Refractive index of the alkaline chlorides at low concentrations, 32.
- Reimann (Dr. A. L.), the contact potential difference between clean and oxygenated tungsten, 594.
- Relativity, general, some applications of Whittaker's extension of Gauss's theorem in, 971.
- Resistance, thermometry below 10° K., 1025.
- Robertson (Dr. David), the transient whirling of a rotor, 793.
- Roots of $\cos z = z$, 528.
- Rotor, transient whirling of a, 793.
- Selach (E.), note on the "bending" properties of symmetrical electrical networks, 192.
- Selectivity of photometric integrators, with particular reference to the photometry of gaseous discharge-tubes, 745.
- Selenium, the absorption band spectrum of, 347.
- Sen (Bibhutibhusan), note on the bending of thin circular disks under certain non-uniform distribution of normal thrust, 1158.
- Seth (Dr. B. R.) on the general solution of a class of physical problems, 632.
- Shastri (N. A.) on some properties of the k -function, 468.
- Shearer (J.), wave-length measurements of the $L\alpha_{1,2}$ and $L\beta_1$ lines of metallic nickel and of nickel salts, 504.

- Silberstein (Dr. L.), the roots of $\cos z = z$, 528.
- Smith (J.), variations in colour vision and colour measurement, 1055.
- Solution, general, of a class of physical problems, 632.
- Southwell (Prof. R. V.) and Owen (J. B. B.), stress calculation for a radially braced polygonal ring, 1073.
- Spark from a glow, the development of a, 562.
- Spiers (Dr. F. W.) and Brindley (Dr. G. W.), atomic scattering factors of nickel, copper, and zinc, 865; an X-ray examination of lattice distortion in copper and nickel powders, 882; an X-ray investigation of lattice distortion in a copper-beryllium alloy, 893.
- , Hoare (Dr. F. E.), and Brindley (Dr. G. W.), X-ray and magnetic measurements of KCl powders in relation to lattice distortion and photochemical coloration, 1041.
- Stress calculation for a radially braced polygonal ring, 1073.
- Surface tension near the critical point, 1163.
- of liquid metals, on the theory of, 1136.
- Symbolic calculus, 977.
- Table of the functions $K_n(x)$ from $n=1$ to $n=16$, 343.
- Tables of the circular and hyperbolic functions, argument $x/\sqrt{2}$, 721.
- of the circular sine and cosine functions, argument $\log_e x$, 731.
- Tavani (F.), the velocity of light and the generalized Lorentz transformations, 835.
- Theory of elementary particles.—Part I. The electromagnetic whirl, 417; Part II. Electromagnetic whirls and elementary particles, 641.
- Thermionic emission from oxide-coated nickel, the influence of impurities in the core-metal, 1.
- Thermometry, resistance, below 10°K. , 1025.
- Tin-antimony and tin-arsenic systems, X-ray studies on the, 913.
- Townsend (Prof. J. S. E.), on theories of ionization, 242.
- Transient whirling of a rotor, 793.
- Tungsten, the contact potential difference between clean and oxygenated, 594.
- Valve circuits, balancing of, 532.
- Velocity of light and the generalized Lorentz transformations, 835.
- Vibration, measurement of small amplitudes of, 953.
- of an elastic column, 997.
- Viscosity and heat conduction according to the geometrical weight method compared with other treatments, 355.
- Voss (Dr. Vivian), the oscillations of atmospheric mercury arcs, 166.
- Walke (H. J.), on the isotopes of the radioactive elements and their disintegration, 25; on the refractive index of alkaline chlorides at low concentration, 32; the non-observance of induced β -radioactivity with the light elements, 266; the isotopes of arsenic, selenium, mercury, and lead, 470; note on the nuclear evolution of iron, cobalt, and nickel, 738.
- and Newman (Prof. F. H.), note on cosmic ray ions and the shower producing radiation, 263.
- Walter (B.), intermittent lightning discharges; a re-discussion of Dr. H. H. Hoffert's lightning photograph, 1144.
- Weinstein (Dr. D. H.), the characteristic values of the Mathieu equation, 288.
- Wheatcroft (Prof. E. L. E.), the theory of the glow discharge, 578.
- and Barker (H.), the development of a spark from a glow, 562; Paschen's law at low striking potentials, 571.
- Whiddington (Prof. R.) and Woodroffe (Dr. E. G.), energy losses of electrons in helium, neon, and argon, 1109.
- Whittaker's extension of Gauss's theorem in general relativity, some applications of, 971.
- Wilkinson (H.), Lowery (Dr. H.), and Bor (J.), the optical constants of the copper-nickel alloys, 390.

- Wood (W. A.), examination of electro-deposited nickel coatings by X-ray diffraction, 964.
- Woodroffe (Dr. E. G.) and Whiddington (Prof. R.), energy losses of electrons in helium, neon, and argon, 1109.
- World-trajectories in Milne's theory, 1062.
- Wright (H. L.) and Coste (J. H.), the nature of the nucleus in hygroscopic droplets, 209.
- X-ray diffraction, examination of electro-deposited nickel coatings by, 964.
- X-ray examination of lattice distortion in copper and nickel powders, 882.
- study of aluminium-zinc alloys at elevated temperatures, 761.
- studies on the systems tin-antimony and tin-arsenic, 913.
- and magnetic measurements of KCl powders in relation to lattice distortion and photochemical coloration, 1041.
- Young's modulus for building materials by a vibration method, the determination of, 304.

END OF THE TWENTIETH VOLUME.
